LUONG VAN HUNG

Add: 151/70 Au Co street, Da Nang city

PERSIONAL DETAILS

- Name: Luong Van Hung
- Date of Birth: 9-Jan-1985
- Gender: Male
- Marital Status: Married

EDUCATIONAL BACKGROUND

- Bachelor of Software Engineering in Duy Tan University of Technology

PROFESSIONAL SUMMARY

- I have over 11 years experince of software development, with about 3.5 years experience with role is Project management and before becoming Project manager, I was a team leader and developer too.
- Collect and analyst data and make the reports to share information to stakeholder (Customer, top management, QA)
- Conduct the daily, analyst bug/issue meeting
- Arrange the source, tasks for team members
- Monitor the tasks, issue, risk management
- Good Objective C, C/C++, Java, Shell script, Perl script, C#, ASP.NET, HTML, ASP, PHP, Java script.
- Strong problem-solving and root-cause analytical skills, ability to debug and understand the existing source code.
- Strong knowledge about OOP, design pattern (singleton, factory, adapter...), MVC
- Strong knowledge about MacOS, Linux and Windows.
- Strong knowledge about VMWare and docker for building about virtual machine environment.

- Strong knowledge about VBA support for excel
- Have high responsibility, good technical skill and can quickly study in working.
- Excellent logic skills.
- Experience of Testing.

SKILLS

Summary:
- Project management
- Mobile developer
- Web developer
- Application developer

Languages:
- Objective C, C/C++, Java, Shell script, Perl script, C#, ASP.NET, HTML, ASP, PHP, Java script.

Operating Systems:
- Mac OSX
- Windows XP/ Vista/ Windows 7
- Linux (Redhat Enterprise Linux)

Development, Design Tools:
- XCode
- Visual Studio 2005/2008/2012
- Eclipse, NetBean, JBuilder, Dreamweaver, Flex Builder etc.
- Visual Source Safe, Tortoise SVN, Sourcetree, git
- ISS, JBOSS, Tomcat and GlassFish.

Databases:
- Oracle, MS SQL Server 2000/2005, DB2, MySQL, MS Access
- Core Data, SQLite

Other:
- Microfsoft Word, Excel and Outlook
- Specially, I can use VBA to create the tools addin for Excel to up perfomance in working.

PROFESSIONAL EXPERIENCE

✧ FPT Software

Apr 2017 – Present
PM (Project Management)
    Project Description:

        Develop, maintain and support application programs for customer, iOS application, web mobile and web. Analyze code for system testing and debugging; create test transactions

    Responsibilities:

- Managing project team with 32 members
- Arrange the members for sub project
- Conduct meeting about estimation for task
- Define and assignee the tasks to team members and monitor them
- Make the reports and conduct meeting with customer about state of tasks
- Define risk, issue and reslove or monitor them
- Communicate with stakeholder as customer, comtor, QA or top management
- Resolve the conflicting of team members
- Coaching/training the members by thers career paths
- Analyst bug, issue and quality for controlling and monitoring them

From Jan 2015 – Apr 2017:
BAL (Business Analyst):
    Project Description:

        Develop, maintain and support application programs for customer, iOS application, web mobile and web. Analyze code for system testing and debugging; create test transactions

    Responsibilities:

- Research business of system customer
- Study requirements
- Review the products of team member (basic designe, detail design, test case etc).

    Technologies Used:

- Apple Framework development, GTMOAuth2, SDWebImage, MBProgressHUD, MapKit.

Platform
- iOS application, web mobile, web, JSON, XML

Database
- Web API, Sqlite, Core data, Oracle

✧ Freelancer (TV Network)

Jan 2017 – Mar 2019:

Technical Leader

Project Description:

Developed new iPhone application that allowed visitors to check availability audio and video base on location. Architectural design for the system, support team member and responsible for all phases from implementing the design, coding, testing, and deployment.

Responsibilities:
- Research business of system customer
- Study requirements
- Architectural design for application
- Developed API

Technologies Used:
- Apple Framework development, GTMOAuth2, SDWebImage, XCDYouTubeKit, MBProgressHUD, Admob, JSON, XML.

Platform
- iOS, Web API

Database
- MySQL, Core data

✧ Movie Player

BA (Business Analyst):

Project Description:

Developed new iPhone application that allowed visitors to check availability movie. Architectural design for the system, support team member and responsible for all phases from implementing the design, coding, testing.

Responsibilities:
- Research business of system customer

- Study requirements
- Create document basic detail, detail design
- Develop modules
- Create Function Unit Test (FUT) document
- Execute base FUT document

Technologies Used:
- Apple Framework development, GTMOAuth2, SDWebImage, MBProgressHUD.

Platform
- iOS mobile application

Database
- Web API, Core data

Restaurant

BA (Business Analyst):

Project Description:

Develop, maintain and support application programs for customer, iOS application, web mobile and web. Analyze code for system testing and debugging.

Responsibilities:
- Research business of system customer
- Study requirements
- Create document basic detail, detail design
- Develop modules
- Create Function Unit Test (FUT) document
- Execute base FUT document

Technologies Used:
- Apple Framework development, GTMOAuth2, SDWebImage, MBProgressHUD, JSON, XML.

Platform
- iOS mobile application

Database
- Web API, Sqlite

✧ Freelancer (Typing Race game)

Jan 2015 – Nov 2015:

Technical Leader

    Project Description:

- Developed and deployed new game for mobile

    Responsibilities:

- Research business of system customer
- Study requirements
- Design pattern connection between client and server
- Create document detail design
- Development difficult functions

    Technologies Used:

- C/C++, cocos2d framework, Socket UDP.

    Platform

- Mobile game
- Application windows

    Database

- SQL Server

Development projects about shell pro for Redhat Enterprise Linux

June 2014 - December 2014

Team Leader

    Project Description:

- Developing new applications, components & functionality for customer's system.

    Responsibilities:

- Research business of system customer
- Study requirements
- Design pattern for system
- Develop modules
- Create Function Unit Test (FUT) document
- Execute base FUT document

    Technologies Used:

- Shell/Perl script

    Platform

- Base on Linux system

Database
- HiRDB/Oracle

Development projects shell for Redhat Enterprise Linux
January 2013 - June 2014
Technical leader

Project Description:
Developing new applications, components & functionality for customer's system.

Responsibilities:
- Research business of system customer
- Study requirements
- Develop modules
- Create Function Unit Test (FUT) document
- Execute base FUT document

Technologies Used:
- Shell/Perl script

Platform
- Base on Linux system

Database
- HiRDB/Oracle

MAGRABBIT INC.

October 2011 – December 2012

Developer

Project Description:
Working with other developers to build JAVA projects to requirements.

Responsibilities:
- Research business of system customer
- Study requirements
- Develop modules

Technologies Used:
- Development of Java web, Java application and ActionScription(Flex), and using Liferay.
- Struts framework, EJB, Servlet

- Developing new applications, components & functionality to existing systems.
- Analysing requirements and Writing technical detail.
- Writing T-SQL.

Platform
- Web Application

Database
- DB2/MySQL

SANG KIEN TRE

October 2009 – July 2011

I and my friends were startup the company for developing website, hosting and domain service

Team leader

Project Description:

Working with other developers to build technical solutions & complete projects to budgetary and quality requirements.

Responsibilities:
- Research business of system customer
- Study requirements
- Develop modules

Technologies Used:
- ASP.NET, ASP, PHP, VBScript, Javascript, HTML, CSS and some few framework development website.
- Plesk control for building hosting

Database
- SQL Server, DB2, MySQL, Microsoft Access

PHI LONG PLAZA

2007 – October 2009

Warranty staff:

Check and detect the trouble of device of customer to prepare them or to send the products to a manufacturer as Intel, Asus, Seagate etc.
